

INSPECTION

Before the inspection can start, a list of appliances and an associated synoptic plan must be available in the building to be inspected.

CONNECTED APPLIANCES

The minimum devices that must be installed and connected at the moment of the inspection are:

- toilet;
- bath/shower with taps;
- kitchen faucet;
- sink with taps;
- compound tap;

MSI Water-link can assist you with the installation if one of the above mentioned devices or appliances is not present.

An additional inspection is obligatory upon completion of the installation.

MINI-OUTDOOR INSTALLATION

If you wish to have water available during the construction phase, you can obtain this through a **mini-outdoor installation**. This mini outdoor installation provides access to water for your constructions.

EXTENSION OR MODIFICATION OF APPROVED INSTALLATION

An additional inspection is required for every expansion or modification of an approved installation.

Request inspection

Inspections are classified into household or non-household inspections. This determines which inspector should come by.

-> **Domestic**: Domestic installations are installations with normal water consumption such as sink, toilet, bath, shower, kitchen tap, compound tap.

-> **Non-domestic**: Guest houses, water supplies in factories, hospitals, schools, restaurants, and agriculture.

All MSI Water-link inspectors are trained and recognized by MSI Water-link. MSI Water-link is responsible for the inspections that the inspectors carry out.

Are you dissatisfied with an inspection by an inspector (accredited by MSI Water-link)? Then we encourage you to enter into a dialogue. If you are unable to resolve the matter, you can submit a complaint via the MSI Water-link website.

You can request an inspection at MSI Water-link by contacting us on msiwaterlink@gmail.com
