MSI WATER-LINK

The world cannot do without water. Both man and his company, and its living environment must have water of the right quality at all times, at the right time, and in the right quantity. This water must be supplied within the safety of well-thought-out infrastructures for supply and usage.

MSI Water-link offers that security through production, storage, and distribution of water. MSI Water-link develops knowledge, and works on intelligent solutions to provide everyone and everything with safe and clean water. This is how MSI Water-link wants to inspire everyone to really use the power of water.

Your community has appointed MSI Water-link as your sewer manager.

As a sewer manager, it is our task to control, expand, and maintain the sewerage system in your community.

WATER CONNECTION

What does MSI Water-link do for you?

MSI Water-link places the water connection line on the street just beside your building. This is to extend local community water supply from the traditional community-based central water distribution system to a household water supply system. Hence we distribute clean and safe water through pipelines to individual households.

Since there are several residential units, the placement of individual standard water meters is assigned to consumers to measure their usage. This allows us to offer correct and separate invoices to users.

What do you do yourself?

You ensure the conformity of your indoor installation with proper regulations. You apply to MSI Water-link through all channels to be their client. You tap water from the main pipeline beside your building. MSI Water-link will inspect your house installation and issue a certificate to permit you to tap from the main pipeline.

Do you want to apply for a water connection?

You must complete your application via our office. MSI Water-link will prepare a quote for the connection based on your request. Here you will also find more information such as instructions, conditions and concrete examples.

For **household water supply** you will sign to the MSI Water-link Non-Business Terms and Conditions, and immediately receive a quote to place the order.

For **commercial water supply** you will sign to MSI Water-link Business Terms and Conditions, and immediately receive a quote to place the order.

Our **standpoint water supply** is open to the general public who cannot afford the formal,

Make your request in time

Keep in mind that we have to plan your connection and apply for the necessary permits.
